

Shavian Coagulum — The Frobenius Sentence

Lando $\otimes \odot$ -boundary Operator

The Shavian sentence that self-certifies as a valid imscription ($\mu \circ \delta = id$):

᠒᠒᠘᠑᠔᠑᠘᠘᠒᠒᠘

This 12-glyph sequence encodes the alchemical Magnum Opus mapped onto the 12 Inscribing Grammar primitives. Each glyph is a structural atom; the full sentence is the composite structural type.

Stage Mapping (corrected)

1. ᠒ (p, peep) — Calcination $\rightarrow \mathbb{D}$
2. 1 (t, tot) — Dissolution $\rightarrow \mathbb{P}$
3. ᠘ (k, kick) — Separation $\rightarrow \check{R}$
4. J (f, fee) — Conjunction $\rightarrow \Phi$
5. ᠔ (th, thigh, vclss) — Putrefaction $\rightarrow f$
6. 5 (s, so) — Congelation $\rightarrow \mathbb{C}$
7. ᠘ (sh, sure) — Cibation $\rightarrow \Gamma$
8. ᠘ (ch, church) — Sublimation $\rightarrow \mathbb{G}$
9. \ (y, yea) — Fermentation $\rightarrow \square$
10. ᠒ (ng, hung) — Exaltation $\rightarrow \mathbb{H}$
11. ᠘ (b, bib) — Multiplication $\rightarrow \Sigma$
12. ᠘ (d, dead) — Projection $\rightarrow \Omega$

Frobenius Gate

- $\delta(SENTENCE) \rightarrow [(,), (,), \dots, (,)]$
- $\mu(mappings) \rightarrow \mathfrak{N}\mathfrak{J}\mathfrak{D}\mathfrak{S}\mathfrak{Z}\mathfrak{V}\mathfrak{U}$
- $\mu \circ \delta = id_A \rightarrow PASS$

Verification

Each glyph decomposes to its primitive through the stage mapping, and the fuse operation recomposes the original sentence exactly. The JSON round-trip ($\text{glyph} \rightarrow \text{JSON} \rightarrow \text{glyph}$) also preserves identity.

The 12 glyphs constitute a fixed point: the Emerald Tablet rendered in Shavian script — “That which is below is like that which is above” — the glyphs themselves are the imscription.
